

Battery pack equalization line

Overview

Because of the inevitable inconsistency during manufacture and use of battery cells, cell variations in battery packs have significant impacts on battery pack capacities, durability and safety for electric vehicles (E. ••Remaining charging capacity estimation (RCCE) is initiated for. Anxieties about the driving range, life and safety hinder the commercialization of electric vehicles (EVs). The anxieties are essentially originated from the energy density, durabilit. 2.1. Dissipative cell equalizationIt seems common sense that for a small battery pack, DCE is a better choice because of its low cost and easy implementation [. As analyzed in Chapter 2, we suggest that DCE is suitable for on-line battery pack equalization in EVs. The objective of pack capacity-based EAs for DCE is to make full use of the cell wit. 4.1. Single cell modelExperimental verification of RCCE-DCE algorithm is difficult because it is unrealistic to compare pack capacity with DCE theoretical pack.

Article Content

On-line equalization for lithium iron phosphate battery packs ...

Dissipative equalization is a feasible on-line equalization method in the battery management system (BMS). However, equalization strategies based on remaining charging capacity (RCC) consistency largely ignore the broader stability and scalability issues that may arise in practical BMS applications, and no explicit methods have been proposed to address ...

Active equalization for lithium-ion battery pack via data-driven ...

Current equalization strategies can be classified as two groups: passive equalization strategies and active equalization strategies. In passive equalization strategies, the portion of cell-level energy above that of the lowest cell is all consumed through resistors or transistors (E et al., 2022). Although this kind of equalization strategies has simple system ...

Module-Based Active Equalization for Battery Packs: A Two ...

Abstract: High-performance and safe operation of a serially connected lithium-ion battery pack in the electric vehicle necessitates effective cell equalization to maintain the state-of-charge of ...

Lithium-ion battery pack equalization based on charging voltage ...

In this paper, an equalization strategy is proposed to solve the inconsistency issues. The difference of inconsistency for lithium-ion battery pack equalization is determined ...

Equalization Control for Lithium-ion Batteries | SpringerLink

This book provides readers with sufficient insight into battery equalization control technologies from both theoretical and engineering perspectives. Distinguished from most of the existing works that focus on the hardware design of active equalizers, this book intends to comprehensively introduce equalization control strategies for lithium-ion battery packs. The ...

On-line equalization for lithium-ion battery packs based on ...

Afterward we suggest that DCE with pack capacity-based EAs is ample for on-line battery pack equalization. Based on our previous work , we present and experimentally verify cell remaining charging capacity estimation (RCCE) and further propose RCCE-DCE algorithm based on RCCE observer. We establish a pack model with 8 cells in series and simulate 4 ...

On-line equalization for lithium iron phosphate battery packs ...

Request PDF | On-line equalization for lithium iron phosphate battery packs based on voltage threshold integral | Dissipative equalization is a feasible on-line equalization method in the ...

A novel active battery equalization control with on-line unhealthy ...

According to , equalization methods can be grouped into three main different categories: first, Battery Selection, which makes up the battery pack by selecting the cells with the same properties. Second, Passive Equalization, in which no active control is utilized to equalize cannot be used for lithium-based batteries as there is a high risk of explosion.

Active Cell Equalization Topologies Analysis for Battery Packs: A ...

In this article, a review of the state-of-the-art active battery cell equalization methods is conducted, where it is classified as adjacent-based, nonadjacent-based, direct cell ...

An active equalization method for series-parallel battery pack ...

The experimental results show that the proposed equalization method can effectively decrease the consistency difference of the battery pack, thus increasing the energy ...

Equalization control strategy and SOC estimation for LiFePO₄ battery pack

On-line equalization for lithium-ion battery packs based on charging cell voltages: Part 1. Equalization based on remaining charging capacity estimation Equalization based on remaining charging ...

Online Equalization Strategy for Lithium-Ion Battery Packs

Several kinds of common active and passive equalization strategies have been systematically compared by using capacity-quantity scatter plots. The results show that the ...

Research on equalization scheme of lithium-ion battery packs ...

Two-level equalization topology uses bidirectional Sepic-Zeta circuits both within and between groups, which can achieve the equilibrium between any cells in a battery ...

On-line equalization for lithium-ion battery packs based on ...

Request PDF | On Feb 1, 2014, Yuejiu Zheng and others published On-line equalization for lithium-ion battery packs based on charging cell voltages: Part 1. Equalization based on remaining charging ...

Research on on-line equalization method of battery pack

Research on on-line equalization method of battery pack Abstract: Lithium ion battery is the most extensive and reliable power supply in electric vehicles. With the development of electric vehicles, the safety, energy density, service life and reliability of lithium-ion batteries continue to improve.

Lithium-ion battery pack equalization based on charging voltage ...

Lithium-ion battery pack capacity directly determines the driving range and dynamic ability of electric vehicles (EVs). However, inconsistency issues occur and decrease the pack capacity due to internal and external reasons. In this paper, an equalization strategy is proposed to solve the inconsistency issues. The difference of inconsistency for lithium-ion battery pack equalization is ...

Bidirectional Active Equalization Control of Lithium Battery Pack ...

As shown in Figure 1, taking the series-connected lithium battery pack equalization unit composed of Bat1, Bat2, Bat3, and Bat4 as an example, each single battery is connected to four switching MOS tubes to form a bidirectional energy transfer circuit, and each MOS tube is connected in parallel with a current-continuing diode, which turns on the ...

Research on Equalization Strategy of Lithium Battery Pack Based ...

Effective balanced management of battery packs can not only increase the available capacity of a battery pack but reduce attenuation and capacity loss caused by cell ...

A multi-module equalization system for lithium-ion battery packs

However, battery packs for electric vehicles often consist of multiple modules, cooperative equalization between modules are essentially required to improve the balance efficiency. A novel cooperative equalization system for multi-modules in the battery pack is proposed in this paper. The system combines active and passive equalization, and also ...

(PDF) Lithium-ion battery pack equalization based on charging ...

Chen Y, Liu X, Fathy HK, Zou J, Yang S. A graph-theoretic framework for analyzing the speeds and efficiencies of battery pack equalization circuits. *Int J Electr Power Energy Syst* 2018;98:85–99. Zheng Y, Ouyang M, Lu L, Li J, Han X, Xu L. On-line equalization for lithium-ion battery packs based on charging cell voltages: Part 1 ...

On-line equalization for lithium-ion battery packs based on ...

It fits packs with different pack consistency and therefore is applicable for on-line equalization in battery packs of EVs. Acknowledgment. This research is funded by the MOST (Ministry of Science and Technology) of China under the contract of No. 2010DFA72760, No. 2011AA11A269 and 2013BAG16B01, the MOE (Ministry of Education) of China under the ...

Research on Equalization Strategy of Lithium Battery Pack Based ...

Effective balanced management of battery packs can not only increase the available capacity of a battery pack but reduce attenuation and capacity loss caused by cell inconsistencies and remove safety hazards caused by abnormal use such as overcharge and over-discharge. This research considers both the equilibration period and the battery operating ...

A review of equalization strategies for series battery packs: ...

It has several issues, such as low equalization efficiency, long equalization time [22,28], and relatively large heat generation in large battery packs with high internal inconsistency. Active equalization, also called non-dissipative equalization, transfers the energy from cells with higher energy to cells with lower energy via an equalization circuit. Active ...

Lithium-ion battery pack equalization based on charging voltage ...

Zheng et al. compared active and passive ECs and suggested that active ECs cost higher and their hardware is difficult to realize, but increased capacity attributed by active ECs is quite small if the cells are properly screened. Passive ECs are suitable for on-line battery pack equalization in EVs.

Bi-Directional Cuk Equalizer-Based Li-Ion Battery ...

For the secure usage of battery charging and discharging within electric vehicles, the study of cell pack equalization technology is essential. Therefore, in this paper, an improved Bidirectional Cuk equalizer (BCEQ) ...

A novel active battery equalization control with on-line unhealthy ...

Semantic Scholar extracted view of "A novel active battery equalization control with on-line unhealthy cell detection and cell change decision" by J. Gallardo-Lozano et al. Research on equalization scheme of lithium-ion battery packs ...

With the state of charge (SOC) of the battery as the equalization variable, and the equalization control strategy is designed based on the consistency controller and PI controller to achieve fast and efficient equalization by dynamic adjustment of equalization current, and to efficiently decrease the inconsistency of the equalized battery packs. The experiments are ...

Active Cell Equalization Topologies Analysis for Battery Packs: A ...

With the increasing use of rechargeable lithium-ion battery packs in numerous applications, it calls for an effective evaluation of active battery cell equalization to enhance the whole battery pack's capacity and performance. Plenty of work has focused on cell equalizing circuit and control algorithm design. Still, none of them is devoted to a comprehensive analysis ...

On-line equalization for lithium iron phosphate battery packs ...

DOI: 10.1002/er.8623 Corpus ID: 252264351; On-line equalization for lithium iron phosphate battery packs based on voltage threshold integral @article{Qian2022OnlineEF, title={On-line equalization for lithium iron phosphate battery packs based on voltage threshold integral}, author={Guangjun Qian and Yuejiu Zheng and Yufang Lu and Xuebing Han and Yuedong Sun ...

Active Equalization of Lithium-Ion Battery Based on

In order to validate the proposed method, an equalization circuit consisting of 12 battery cells is built on Matlab/Simulink. Simulation results show that the proposed method can effectively balance the battery pack and ...

On-line equalization for lithium-ion battery packs based on ...

Because of the inevitable inconsistency during manufacture and use of battery cells, cell variations in battery packs have significant impacts on battery pack capacities, durability and safety for electric vehicles (EVs) To reduce cell variations and increase pack capacity, cell equalization is essentially required In the series of two papers, we discover that dissipative cell ...

A multi-module equalization system for lithium-ion battery packs

Battery inconsistency in electric vehicles is an important factor causing battery capacity degradation and safety problems. Therefore, battery equalization technology plays an important role in improving the performance and safety of battery packs. Among the existing equalization technologies, passive equalization is inefficient and active equalization is ...

Research on equalization strategy of lithium-ion batteries based ...

On-line equalization for lithium-ion battery packs based on charging cell voltages: part 1. Equalization based on remaining charging capacity estimation . J. Power Sources, 247 (1) (Feb. 2014), pp. 676-686. View PDF View article View in Scopus Google Scholar X Wang, KWE Cheng, YC Fong.
