

El salvador energy storage zero carbon power generation project

Overview

Jinko ESS has announced the deployment of a 2.15MWh C&I energy storage project in El Salvador, utilizing 10 of its advanced liquid-cooled SunGiga 215kWh systems. Why is the El Salvador power project important?

The power project, which began taking shape in 2013, is important for El Salvador's energy security risks, along with providing an economic boost by reducing carbon emissions by 600,000 tons annually. Two 230-kV electric transmission lines, one of which is a key investment in El Salvador's clean energy future. This initiative combines cutting-edge battery technology with renewable energy integration, offering a blueprint for sustainable power. The project will store 1% of national electricity production and total installed PV capacity reaching 633 MW, the country's energy matrix has undergone a fundamental transformation—bringing unprecedented opportunities and equally unprecedented technical challenges. The waste heat feeds one steam turbine.
