

How to connect solar DC 220v to the grid

Overview

Before we proceed to the steps on how to hook up solar panels to the grid, you need to prepare the following materials first: Before installing the solar panels, you need to figure out your required solar system size. To determine the size of your system, check the wattages of all the electrical devices you'll be. As the name suggests, a grid-connected solar system is tied to the utility grid. What distinguishes it from other solar setups is that the energy runs in two different ways. When your household requires more energy than your solar system generates, the house draws in energy. There are several reasons why deciding to go for a grid-connected system can offer you limitless benefits. Nonetheless, the three main reasons are: A grid-tied solar system is ideal for homeowners who do not have a considerable budget for setting up a solar PV system that's large.
