

How to install photovoltaic without stepping on the panel

Overview

Ballasted solar mounting systems are the go-to solution for mounting solar to roof surfaces without drilling. That's why more and more engineering firms, installers and operators are looking for maintenance solutions that don't involve stepping on solar panels, using technical walkways, safe access systems and specific structures for rooftop work. Why shouldn't you step on solar panels?

Photovoltaic. Imagine designing your dream solar array while sipping coffee in pajamas - no ladder-climbing engineers required. To help you understand more about it, in this article, we explain how resistant solar panels are, how to walk on top of a solar panel properly, and what will happen if you do it the. At the very beginning, it is worth noting that the law does not prohibit the installation of photovoltaic panels on your own, but in accordance with the provisions and regulations of the OSD, in order for the installation to be connected, it is necessary to have an electrical qualification. There are two habits that we frequently see when installing solar panels on a roof: A common mistake is designing huge arrays of multiple rows without spaces (aisles) between them. This makes future basic tasks such as cleaning and maintaining the modules difficult. Which roofs are suitable for the installation.
